How can I solve this astroquery problem?

Felix Stoehr - 2021-05-27 - Archive & Data Retrieval

If [astroquery](#) is not working as expected for you, first try upgrading that software to the latest version with

```
pip3 install --upgrade --pre astroquery
```

In case the upgrade does not solve your problem, please create an [ALMA Helpdesk ticket](#).

You can also report problems to the [astroquery github](#) page, especially if you are convinced that the problem is purely an astroquery software issue.
