How does CASA calculate the visibility weights?

Sarah Wood - 2023-11-01 - Offline Data Reduction and/or CASA

A description for how visibility weights are defined and calibrated in CASA is available in this [memo](#) and as an appendix in the [CASA Documents](#) from version 4.2.2 onwards.

More information can be found in the [Data Weights And Combination CASA Guide](#).

Note: The treatment of weights depends on which version of CASA is used.
