## Where can I find the configuration files for CASA simulation?

Sarah Wood - 2020-09-21 - Offline Data Reduction and/or CASA

Representative array configuration files for Cycles 1 and after are linked to from the "[CASA Simulator and Configuration Files](#)" section of the [Tools page](#) in the ALMA Science Portal. Configuration files for Cycle 0 are available from the [Cycle 0 Documentation page](#). We recommend using these configuration files for detailed investigations and simulations.

However, for convenience, some configuration files are available in several versions of CASA. The location of the files in a given CASA installation can be found using this command at the CASA prompt (also accessed through the inline help for the CASA tasks *simobserve* and *simalma*):

```
os.getenv('CASAPATH').split(' ')[0] + '/data/alma/simmos/'
```
