Which browser should I use for pipeline weblog reviews?

Luke Maud - 2020-09-21 - Archive & Data Retrieval

For Mac OS and linux users the recommended internet browser to use for full functionality of the pipeline weblog viewing is **Firefox**.

Other browsers such as the default Safari, or the often used Chrome *do not* provide full support for the weblog interface - errors

can include not opening or loading file, the 'by topic' or 'by task' pages, due to an inability to find the correct reference html page links. There may also be issue to produce all plots, and or the direction buttons and side bar links.
