Why does beam-area conversion fail in AIPS for fits images exported with CASA?

Misato Fukagawa - 2020-09-21 - Historical Articles

The CASA task `exportfits` sets the header keyword BUNIT as 'JY/BEAM' in CASA 4.2 and earlier, whereas it is 'Jy/beam' in CASA >= 4.3. The BUNIT keyword is case-sensitive and 'Jy/beam' is adopted as FITS standard.

This change of the units can cause a problem on the beam-area conversion with some AIPS tasks if the AIPS version is <= 31DEC14 and the CASA version for `exportfits` is >=4.3. The issue has been fixed in the 31DEC15 version of AIPS. The solution for older versions of AIPS is to change the units in the header to 'JY/BEAM' from 'Jy/beam' with PUTHEAD.
